

Green Finance

The objective of this seminar is to present the new trends and dynamics in financial greening from the perspective of central banks and supervisory authorities on banks, insurance and markets. On the one hand to improve the resilience of financial systems to climate and natural risks. On the other hand, to contribute to the energy transition and facilitate its financing. In particular, it will detail the work of the NGFS (Network for Greening the Financial System). The program will also address statistical duties and socially responsible investment in portfolio management. It will present an overview of regulatory activity at European, international and domestic levels.
