Euro area economic and financial developments by institutional sector: third quarter of 2021

Euro area [net saving](#) increased to €776 billion in four quarters to third quarter of 2021, compared with €714 billion one quarter earlier

Household [debt-to-income ratio](#) grew to 97.0% in third quarter of 2021 from 95.4% one year earlier

Non-financial corporations' [debt-to-GDP ratio](#) (consolidated measure) decreased to 79.8% in third quarter of 2021 from 81.9% one year earlier

Total euro area economy

Euro area [net saving](#) increased to €776 billion (8.1% of euro area net disposable income) in the four quarters to the third quarter of 2021, compared with €714 billion in the four quarters to the previous quarter. Euro area [net non-financial investment](#) grew to €440 billion (4.6% of net disposable income), owing to higher investment by non-financial corporations and households, while net investment by financial corporations and government was broadly unchanged (see Chart 1).

Statistical release / 27 January 2022

Euro area economic and financial developments by institutional sector: third quarter of 2021

Euro area [net lending](#) to the rest of the world increased to €358 billion (from €345 billion in the previous quarter), reflecting net saving increasing more than net non-financial investment. Net lending by households decreased to €675 billion (7.0% of net disposable income, after 7.7% previously). Net lending of non-financial corporations (€318 billion, 3.3% of net disposable income) and financial corporations (€115 billion, 1.2% of net disposable income) was broadly stable. The overall decrease in net lending by the total private sector was more than offset by lower net borrowing by the government sector (-7.8% of net disposable income, after -8.6% previously).

Households

The annual growth rate of household [financial investment](#) decreased to 3.9% in the third quarter of 2021, from 4.1% in the previous quarter. This deceleration was mainly due to currency and deposits growing at a lower rate (6.1%, after 6.8%), and net sales of debt securities increasing more strongly (-11.1%, after -10.0%) (see Table 1 below).

Households were net buyers of listed shares. By issuing sector, they were net buyers of listed shares of non-financial corporations, insurance corporations and the rest of the world (i.e. shares issued by non-residents), while shares of MFIs were sold on a net basis. Households continued to sell debt securities (in net terms) issued by MFIs, government, other financial institutions and the rest of the world, while debt securities issued by insurance corporations were bought on a net basis (see Table 1 below and Table 2.2. in the Annex).

Notes

These data come from a second release of quarterly euro area sector accounts from the European Central Bank (ECB) and Eurostat, the statistical office of the European Union. This release incorporates revisions and completed data for all sectors compared with the first quarterly release on "Euro area households and non-financial corporations" of 11 January 2022.

The debt-to-GDP (or debt-to-income) ratios are calculated as the outstanding amount of debt in the reference quarter divided by the sum of GDP (or income) in the four quarters to the reference quarter. The ratio of non-financial transactions (e.g. savings) as a percentage of income or GDP is calculated as sum of the four quarters to the reference quarter for both numerator and denominator.

The annual growth rate of non-financial transactions and of outstanding assets and liabilities (stocks) is calculated as the percentage change between the value for a given quarter and that value recorded four quarters earlier. The annual growth rates used for financial transactions refer to the total value of transactions during the year in relation to the outstanding stock a year before.

1) Annual growth rates for financial transactions are calculated as $100 \cdot (f(t) + f(t-1) + f(t-2) + f(t-3)) / F(t-4)$ where $f(t)$ stands for the transactions in quarter t , and $F(t-4)$ for the end-of-quarter stock value four quarters earlier.

2) Calculated as $100 \cdot (x(t) - x(t-4)) / x(t-4)$ where $x(t)$ stands for the transaction or end-of-quarter stock x in quarter t , and $x(t-4)$ for the transaction or stock four quarters earlier.
