

Turnover in retail trade at the end of May 2017

15 June 2017

Turnover in retail trade grew over the past three months

Over the past three months, turnover in retail trade rose by 1.0% (adjusted for seasonal and working-day variations). Sales of industrial goods and food improved at a similar pace (0.9% and 1.1% respectively). The personal goods (textile and clothing and footwear) and household goods (household appliances, furniture, etc.) sectors were the strongest performers.

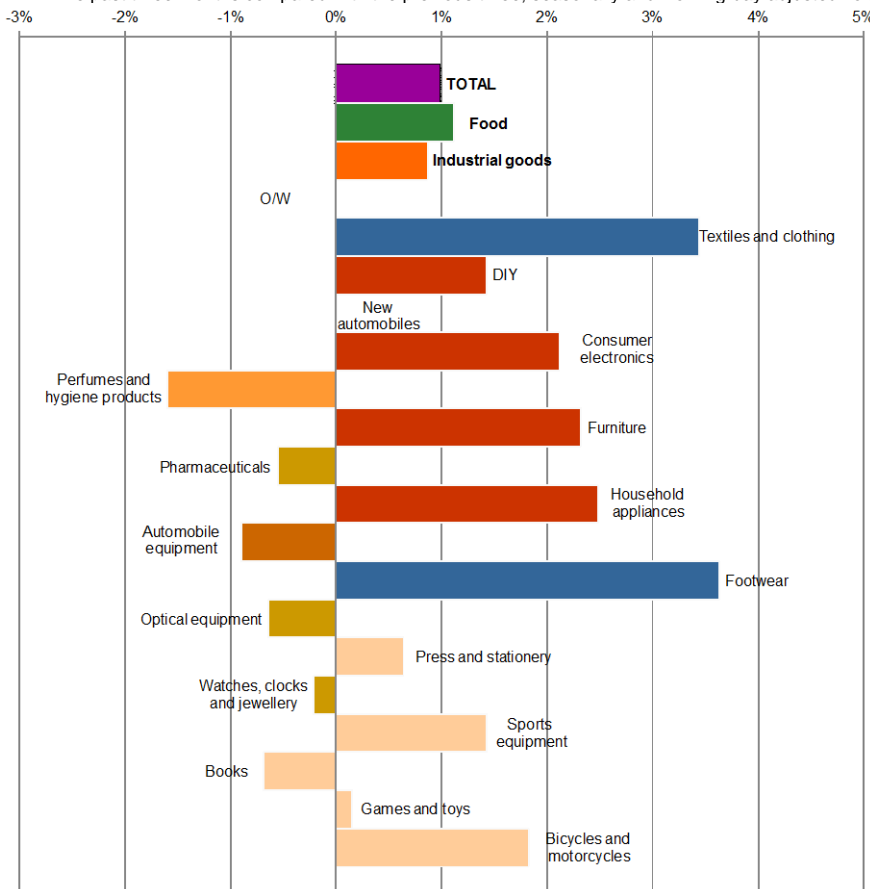

Sales of small retail stores inched up by 0.4%, while those of large general retailers gained 0.7%: hypermarkets, distance selling and supermarkets were up 1.3%, 0.8% and 0.5% respectively, while sales of department stores declined slightly.

In May, turnover in retail trade was almost stable, growing by 0.1%. Food sales inched down by 0.8% while those of industrial goods rebounded by 0.7% thanks to the strength of the textile and clothing, footwear and automobile sectors.

Sales of small retail stores were almost stable whereas those of large general retailers lost ground.

Total industrial goods and food sales: Q/Q-1 change

The past three months compared with the previous three; seasonally and working-day adjusted volume terms

	Weight
Food products	43%
Industrial goods o/w	57%
Textiles and clothing	10%
DIY	7%
New automobiles	6%
Consumer electronics	5%
Perfumes and hygiene products	4%
Furniture	4%
Pharmaceuticals	3%
Household appliances	3%
Automobile equipment	3%
Footwear	2%
Optical equipment	2%
Press and stationery	2%
Watches, clocks and jewellery	2%
Sports equipment	1%
Books	1%
Games and toys	1%
Bicycles and motorcycles	1%

Notes :

- Sectors are classified according to the relative weight of the products included in the total aggregate of retail trade (see methodology)
- The aggregated and by sub-sector series are seasonally adjusted on an individual basis: the seasonally adjusted series do not represent the sum of the seasonally adjusted components.

Retail trade by certain outlet category: Q/Q-1 change

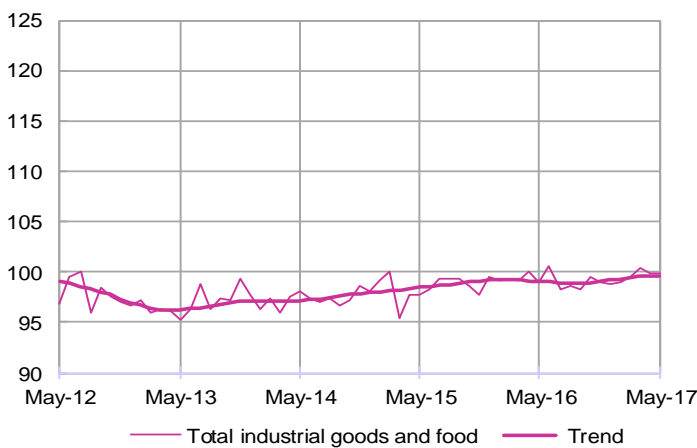

The past three months compared with the previous three; seasonally and working-day adjusted volume terms

Large general retailers	Weight
Hypermarkets	50%
Supermarkets	33%
Distance sales	11%
Department stores	6%

Total industrial goods and food

Distance sales

Source: FEVAD and Banque de France

index in seasonally-adjusted volume terms (100 = 2010)

Provisional data as of the 7th working day following the month under review.

Notes:

- The FEVAD and the Banque de France work together to publish data on product distance selling, including online sales, in France (excluding food sales).
- The aggregated and by sub-sector series are seasonally adjusted on an individual basis: the seasonally adjusted series do not represent the sum of the seasonally adjusted components.
- Sectors are classified according to the relative weight of the distribution methods included in the aggregates for small retail stores and large general retailers (see methodology)
- However, the "large general retailer" aggregate is not a sub-aggregate of the "total industrial and food product" index. Rather, it is an independent index that covers the overall turnover of hypermarkets, supermarkets, department stores and distance selling. It does not cover national chains.
