

Turnover in retail trade at the end of October 2017

15 November 2017

Retail sales stabilised over the past three months

Over the past three months, turnover in retail trade remained almost stable, edging down by 0.1% (data adjusted for seasonal and working-day variations). Food sales were down by 0.8%. Sales of industrial goods held almost steady, supported by sales of consumer electronics, perfumes and pharmaceuticals.

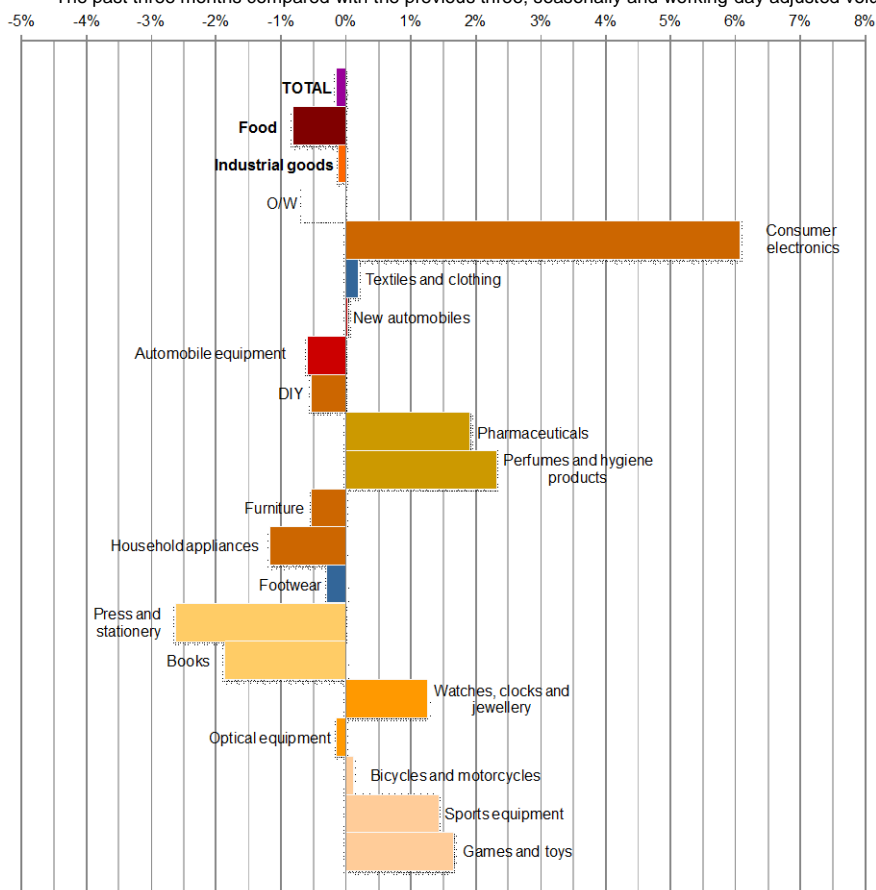

Sales of small retail stores increased by 1.4%, while sales of large general retailers were virtually stable, inching up by 0.1%. The dynamism of distance selling and department store sales was partially offset by the decline in hypermarket and supermarket sales.

In October, turnover in retail trade receded by 4.1% following the rebound recorded in September. Food sales declined by 1.7%. Industrial goods sales fell more sharply, slipping by 4.4%, notably due to weather conditions uncondusive to sales of clothing-textiles and footwear.

All of the outlet categories posted a decline.

Total industrial goods and food sales: Q/Q-1 change

The past three months compared with the previous three; seasonally and working-day adjusted volume terms

	Weight
Food products	43%
Industrial goods o/w	57%
Textiles and clothing	10%
DIY	7%
New automobiles	6%
Consumer electronics	5%
Perfumes and hygiene products	4%
Furniture	4%
Pharmaceuticals	3%
Household appliances	3%
Automobile equipment	3%
Footwear	2%
Optical equipment	2%
Press and stationery	2%
Watches, clocks and jewellery	2%
Sports equipment	1%
Books	1%
Games and toys	1%
Bicycles and motorcycles	1%

Notes :

- Sectors are classified according to the relative weight of the products included in the total aggregate of retail trade (see methodology)
- The aggregated and by sub-sector series are seasonally adjusted on an individual basis: the seasonally adjusted series do not represent the sum of the seasonally adjusted components.

Retail trade by certain outlet category: Q/Q-1 change

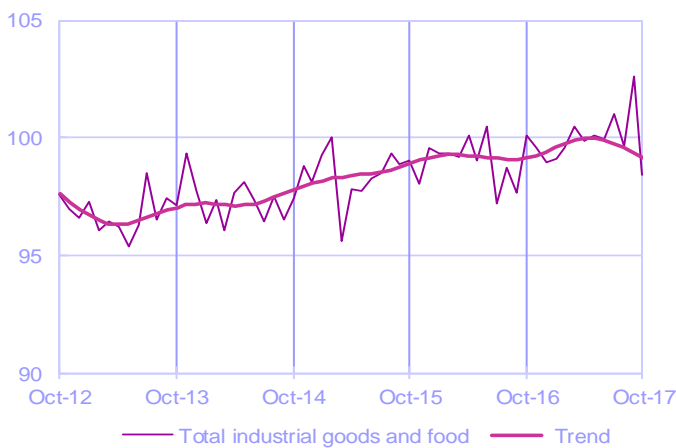

The past three months compared with the previous three; seasonally and working-day adjusted volume terms

Large general retailers	Weight
Hypermarkets	50%
Supermarkets	33%
Distance sales	11%
Department stores	6%

index in seasonally-adjusted volume terms (100 = 2010)

Provisional data as of the 7th working day following the month under review.

Notes:

- The Fevad and the Banque de France work together to publish data on product distance selling, including online sales, in France (excluding food sales).
- The aggregated and by sub-sector series are seasonally adjusted on an individual basis: the seasonally adjusted series do not represent the sum of the seasonally adjusted components.
- Sectors are classified according to the relative weight of the distribution methods included in the aggregates for small retail stores and large general retailers (see methodology)
- However, the "large general retailer" aggregate is not a sub-aggregate of the "total industrial and food product" index. Rather, it is an independent index that covers the overall turnover of hypermarkets, supermarkets, department stores and distance selling. It does not cover national chains.
