

Balance of payments – France • September and third quarter 2019

Deterioration of the current account deficit

In 2019-Q3, the **current account** deficit stood at -6.2 billion euros, a deterioration of 1.4 billion compared with the previous quarter (seasonally-adjusted). The deficit in goods increased by 2.8 billion euros to reach -12.5 billion, notably due to a deterioration of non-energy goods transactions. Conversely, the services surplus reached 6.1 billion euros, i.e. up 0.8 billion from the second quarter.

The **financial account** balance stood at -36.6 billion euros (non-seasonally adjusted). The direct investment balance became slightly in surplus at 2.6 billion euros. Portfolio investments recorded strong net inflows of 73.2 billion euros: residents sold 21.3 billion euros of foreign securities, whereas French securities purchased by non-residents (liabilities) were stable at 51.9 billion euros. Conversely, “loans and deposits” resulted in net outflows of 31.1 billion euros.

In September, the current account balance remained largely in deficit at -2.7 billion euros after -3.0 billion in August.

Methodological notes relating to page 1 and page 2 tables

(1) Data on trade in goods are FOB-FOB values, which means without cost, insurance and freight. The latter expenditure is recorded in the services item. Exchanges of goods include general merchandise as published by the Directorate General of Customs and Excise (DGDDI) on one side, merchanting and methodological adjustments calculated by the Banque de France, on the other side. It ensures the comparability of French balance of payments with those of other countries and its conformity with the international standards set by International Monetary Fund. The key underlying concept in balance of payments is the economic ownership (as for the national accounts).

(2) Services other than travel (tourism and professional travels), transport services, professional and management consulting services, R&D and development and technical services, trade-related and other business services include manufacturing, maintenance and repair, construction, insurance and pension services, financial services, charges for the use of intellectual property, telecommunication, computer and information services, personal, cultural and recreational services and government goods and services.

(3) Income includes primary and secondary incomes. Primary income refers to the flows received by economic agents for their participation in the production process ("compensation of employees") or for the provision of financial assets ("investment income") or for the rental of natural resources ("rent"). Taxes and subsidies on products and production are also included in primary income. Secondary income records current transfers between residents and non-residents. A transfer is a transaction that involves the provision of a good, service, financial asset or another non-produced asset without receiving something of economic value in exchange.

(4) The "other investment" (loans and deposits) component of the financial account includes all transactions in financial assets and liabilities with non-residents that do not concern direct investment, portfolio investment, financial derivatives or reserve assets. In practice, this mainly concerns bank deposits and interbank lending, as well as loans and deposits made by insurance companies and all kinds of investment companies and funds.
