(b) mainly cross-border intercompany lending/borrowing

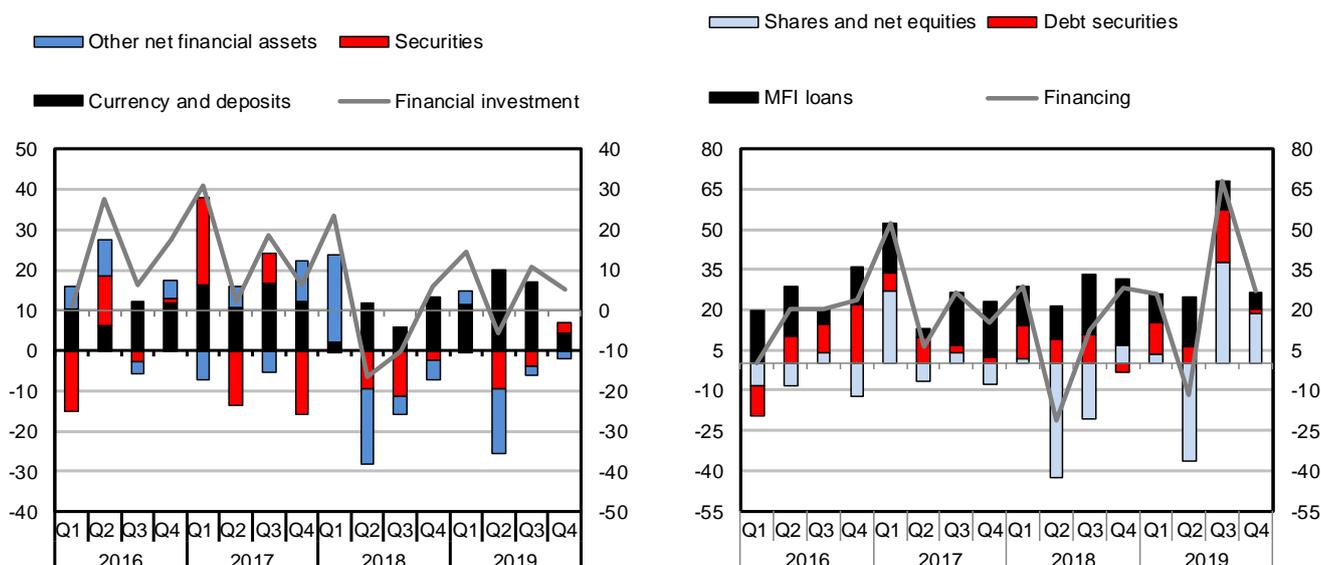

(c) including direct investment (equity capital and reinvested earnings)

In the fourth quarter, financial investment of **non-financial corporations (NFC)** increases for the second consecutive quarter, owing to the positive contribution of deposits and securities. Simultaneously, financing increases, but at a slower pace than in the previous quarter.

In 2019, NFC increase their financial investment flows more strongly. The significant rise in deposits is partly offset by negative flows of securities and cross-border loans. This year, debt flows are again very dynamic.

In the last quarter, financial investment from **general government** strongly declines due to a significant diminution of deposit holdings. Meanwhile, general government reduces its debt by repurchasing bonds.

In 2019, debt flows are nonetheless increasing compared to 2018, stimulated by a rise in bond issuance. Financial investment growth is lower, considering fewer investment fund shares purchases.

In 2019 Q4, **household** financial investment strengthens, driven by renewed purchases of listed shares and non-MMF investment fund shares. At the same time, household debt continues to grow at a steady pace.

Over the year as a whole, households increase significantly their financial investment, with a preference for the least risky assets such as passbook savings and life insurance plans in euros. Borrowings are also more vigorous than in 2018.
