In the second quarter of 2020, the financing of **non-financial corporations** (NFCs) increases very sharply in the context of the COVID-19 pandemic, driven by debt securities and MFI loans (notably State-guaranteed loans). At the same time, financial investment increases significantly compared with the previous quarter. NFCs accumulate deposits and securities in the form of money market fund shares, while other net financial assets decline.

In the second quarter, **general government** financing increases sharply, in relation to the rise in their issuance of debt securities to finance emergency measures in response to the health crisis. At the same time, financial investment increases sharply, driven by the rise in deposits. The flows of securities acquisition, on the other hand, become negative due to the decline in investment in debt securities.

In the second quarter, the dynamic of financial investment made by **households** gains momentum. Transferable deposits continue to grow strongly, due to the 40 days of lockdown in April and May, which hampered consumption. Investment in passbook savings accounts also firms up due to these "forced savings". Investment in securities also increases, driven by listed shares and non-MMF investment fund shares, while flows of life insurance and pension plans are lower. Flows of MFI loans remain positive and at the same level as in the first quarter, but are less dynamic than in the previous years.
