Additional information

The different categories of funds under review are defined by the Autorité des Marchés Financiers (AMF – French Financial Markets Authority). The classification of each fund is based on its real risk exposure. The definition of the exposure and the risk thresholds for each category are developed in AMF Instructions 2011-19, 2011-20 and 2011-21.

The **Stoxx 600 index** comprises 600 companies residing in 18 European countries.

The **Barclays index** comprises sovereign and quasi-sovereign bonds, corporate bonds and asset-backed securities. It includes securities denominated in 24 currencies, issued from developed and emerging markets. The rating of the securities is “investment grade” with residual maturity over one year.

The **Euro-MTS Index** is a euro-denominated bond index that measures the performance of the eurozone government bond market across all maturities of the underlying bonds combined.

The performance of the indices is measured by total return (price change and coupons/dividends reinvested). The yield spreads between these indices and the performance of UCIs in France reflect differences in composition and management orientation, in particular the split between highly liquid sovereign bonds issued by major advanced countries, less liquid sovereign bonds or bonds with a higher risk/return profile and bonds issued by private issuers.
